

Tintometer India introduces "Waste Water Package"
A workhorse that you need for complete waste water analysis!

What is waste water? Why test the waste water samples?

Municipal wastewater is a byproduct of the use of water for domestic, commercial, industrial or agricultural processes. Meeting wastewater effluent standards is a challenge for wastewater facilities around the world. Having a robust system for collecting and treating sewage is a key factor to public health.

What does the package include?

- BD600: Determination of Biological Oxygen Demand
- COD Set up-MD200:Determination of Chemical Oxygen Demand. The COD Setup comprises MD200 photometer, 25 tube tests for each of the two lower measuring ranges, a reactor for sample digestion and a vial stand
- SD335 Multi- Waterproof handheld meter for the simultaneous determination of pH, temperature and either conductivity/TDS/salinity or dissolved oxygen

Applications

Boiler Water | Cooling Water | Drinking Water Treatment | Galvanization | Raw Water Treatment | Waste Water Treatment

• Convenient kit includes everything you need to start testing your waste water samples • Designed for water quality experts
Our waste water package ensures consistency, accuracy, & reliability!!
